Slide with timer

It will change right in five seconds

02

Heading

In your slides text you can use [links](#) and various inline elements for *emotional* and **strong** emphasis or just for *italic* or **bold** decoration. `<code>` is used for inline code samples.

03

Two rows.
Mighty heading

You can use two lines header but it would reduce space on a slide.

The "Ribbon" theme is designed for seven lines of code after one-line header by default.

This paragraph could be used as a footnote

Various lists

- Simple lists are marked with bullets.

- Ordered lists begin with a number.

- You can even nest lists one inside another.

  1. Or mix their types.

  2. But do not go too far.

  3. Otherwise audience will be bored.

- Look, seven rows exactly!

05

Serious citation

> *You can wrap one or more paragraphs into citation, which will make text italic and add a nice quote on the left. Giving the citation source would make it even more serious.*

06

When you have a lot of code

```
01. <html lang="en">
02. <head>   <!--Comment-->
03.     <title>Shower</title>
04.     <meta charset="UTF-8">
05.     <link rel="stylesheet" href="s/screen.css">
06.     <script src="j/jquery.js"></script>
07. </head>

    07
```

Code in separate blocks

```
<html lang="en">
```

Now you can add a note for each block

```
<meta charset="UTF-8">
```

And explain what is interesting about it

08

You can shout this way

And place any picture

Inner navigation

1. Lets you change objects one by one

2. For example, show list items

3. Or switch pictures

4. And much more

5. But it will work only once
